

Decentering on Self-Management of Stress and End of Life Planning in Caregivers of Cancer Patients
Sara L. Douglas, PI

Over 500,000 patients in the US are living with cancer (National Consensus Project for Quality Palliative Care). Significant advances in early diagnosis and treatment (Harrington et al., 2014) have led to improved outcomes for patients with advanced cancer (when cure is not possible) not only serve in traditional poor physical and psychological outcomes but also deal with additional concerns
